

SHRUTKEERTI SANGOLKAR

(857) 351-9673 | Boston, MA | [Email](#) | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Full Stack Software Engineer with 1+ years of production experience building Spring Boot microservices and React applications at scale. Skilled in architecting event-driven systems with Kafka, Redis, and RabbitMQ, deploying cloud-native infrastructure on AWS with Terraform, and delivering end-to-end features in Agile environments.

EDUCATION

Northeastern University <i>Master of Science in Information Systems (CGPA: 3.5/4.00)</i>	Boston, MA May 2026
Pune University <i>Bachelor of Engineering in Information Technology (CGPA: 3.82/4.00)</i>	Pune, India Apr 2022

SKILLS

Languages: Java, JavaScript, TypeScript, Python, SQL, Bash
Backend: Spring Boot, Spring MVC, Spring Security, Node.js, Express.js, REST APIs, Apache Kafka, RabbitMQ
Frontend: React, Angular, HTML5, CSS3/SASS, Tailwind CSS, Bootstrap
Databases: PostgreSQL, MySQL, MSSQL Server, MongoDB, Redis
Cloud & DevOps: AWS (EC2, S3, RDS, VPC, IAM, CloudWatch), GCP, Terraform, Docker, Kubernetes, CI/CD (Jenkins, GitHub Actions), Linux
Practices: Microservices, Event-Driven Architecture, TDD, Agile/Scrum, Design Patterns, System Design, JWT/OAuth, SonarQube

EXPERIENCE

Analyst - Software Engineer <i>Capgemini Technology Services India Limited</i>	Dec 2022 – Dec 2023 Mumbai, India
- Designed and implemented 7+ Spring Boot microservices and ReactJS modules as a cross-functional team member, delivering production-ready software systems with high availability, low latency, and resiliency - Implemented CI/CD pipelines with GitHub Actions, Jenkins, and SonarQube, reducing deployment time by 30%; actively participated in scrum ceremonies and drove operational excellence - Enforced coding standards through TDD practices and code reviews using JUnit and Mockito, strengthening integration testing coverage and reducing post-deployment defects across web-based and API-based services	
Intern - Software Developer <i>Capgemini Technology Services India Limited</i>	March 2022 – June 2022 Mumbai, India
- Developed responsive applications using Java, Spring Boot, React, and PostgreSQL, delivering 3 feature enhancements that directly improved customer-facing experience and reduced user-reported issues - Strengthened test reliability across development cycles through JUnit-based TDD and automated testing, while supporting Agile scrum activities, technical documentation, and production issue troubleshooting	

PROJECTS

Riskient – Portfolio Risk Analytics Platform GitHub	Apr 2026
- Architected an event-driven microservices platform (Java 21, Spring Boot, React, Kafka, RabbitMQ, Redis, PostgreSQL) with 3 independently deployable services streaming live stock prices, reducing data latency by 85% via Redis caching - Engineered a real-time risk engine computing Volatility, Sharpe Ratio, VaR, and Beta with automated market-hours detection that eliminated 100% of after-hours zero-value errors - Integrated AI portfolio analyst (Groq/Llama 3.3 70B) for natural language risk insights, JWT + OTP authentication, and a RabbitMQ alert pipeline – containerized with Docker Compose and GitHub Actions CI/CD	
Cloud Computing Infrastructure & Deployment GitHub - App GitHub - Infra	May 2025
- Designed and deployed a cloud-native SaaS web application using microservices architecture, REST APIs, Terraform (IaC), and AWS cloud services (EC2, VPC, S3, RDS, Auto Scaling, Load Balancer, CloudWatch, IAM) to support scalable system operations - Reduced infrastructure provisioning time by 60% through Terraform automation; implemented metrics, monitoring, CI/CD automation, and logging workflows using CloudWatch to improve reliability across environments	
Patient Complaint Management System GitHub	Dec 2024
- Built a healthcare complaint triage application (Java, PostgreSQL) that automated severity-based routing (Severe, Moderate, Follow-up), reducing manual routing errors by 30% and improving response time for critical cases - Implemented rule-based severity detection algorithms and clinical reporting dashboards, enhancing database consistency and enabling data-driven decisions based on clinician feedback
